WILD FLOWERS

Lapeer, Michigan

HARD TIMES PRICE LIST FOR 1921.

We were preparing a more elaborate catalogue on Wild Flowers than has ever before been issued by any one, going deeply into soil and other conditions, but the demand on all our people who might be able to furnish information has been so great in assisting in plantings, etc. on the large private estates, that to finish it became hopeless for this year, hence our "Price List" in this form. The information we are preparing will be the result of the collection in some instances of a million plants of a given variety. "The hands that dug one million plants can replant them", and the information will be issued for the benefit of the public. In the mean time we have condensed much of the information in our price list.

EXPOSURE - SOIL - MOISTURE

For the convenience of our customers we have marked after each herbaceous plant and fern letters of the alphabet to indicate exposure, soil and moisture as we find them predominating in the native haunts in which we collect the wild flowers. The table below tells the significance of the letters:

SOIL

- A Means very light sand.
- B Means light soil, black loam and gravel.
- C Means heavy soil.
- D Means muck.
- E Means leaf mold.
- F Means any soil.
- G Means rocky soil.

MOISTURE

- K Means aquatic condition.
- L Means swamp.
- M Means springy
- N Means wet in seasons and dry in seasons.

- O Means knolls surrounded by moisture and wet soil
- P Means dry low lands, occasionally flooded.
- Q Means dry hill sides, etc.
- R Means well drained soil.
- S Means approaching arid.
- T Means Sphagnum Moss.

EXPOSURE

- V Means dense shade.
- W Means $\frac{1}{4}$ sun.
- X Means $\frac{1}{2}$ Sun.
- Y Means $\frac{3}{4}$ sun.
- Z Means full sun.

Frequently you will notice two or more letters of each classification as "ZX," which means that plant will grow in full sunshine to one-half shade, or "LM" which would indicate that either condition would maintain the plant.

TIME TO PLANT

On large orders where planting is continuous all summer, the time to plant is immediately after collection, which runs from early spring until fall.

Of course, when you have a large number of varieties and only a few plants of each, it is best to get all together in fall or spring, preferably fall.

LARGE ORDERS.

This price list only indicates prices on comparatively small orders. We are ready to take orders of 25,000 to 500,000 or more of a given variety at more reasonable prices. On large orders, "woods" or "wild run" are acceptable, and this allow another reduction in price. Write for these if interested.

PLANTING CONTRACTS.

We are now organized to carry on plantings of Wild Flowers in any locality in the country. The prices we ask for this service will be more expensive than one might hope to secure skilled labor for, on account of the transportation, etc., but when you consider the question of results in knowing every bulb or root is planted where and as it should be, the extra costs would be considered comparatively small, or of no account. Write for prices.

Taxus Canadensis	Ground Hemlock			.25	2.00	10.00
Uva-Ursi	Deer-Berry			.50	3.50	30.00

TREE MOVING.

We have the most up-to-date tree moving outfit in the country. By our "Mason Method" we move any tree by the ball of earth without breaking the ball or cracking it. In no way do we apply the motive or holding power to the tree itself. By this method the tree will never know it has been moved. Trees can easily be moved one hundred miles or more along the roads.

All the other methods break the cambium layer and thus injures the trees. We know, we own and operate the other kinds. The "Mason Method" costs more but it produces results.

If you have a favorite tree or overgrown bunch of shrubbery that you would like to have moved, write us for prices.

RUSTIC WOOD.

Let us give you prices on rustic wood. We furnish all kinds cut to order.
